

SAFIR

Formerly called 'Varrie'
Tentipi® patent

It's more than a tent; it's a home in your rucksack...

For extreme expeditions, challenging trekking, or a multitude of different outdoor activities – this is the world's most versatile tent for people who need the maximum performance and flexibility. You can choose either lightweight or breathable cotton/polyester fabric. It has a patented In-Tent Vent™ system.

- Optimal height/width relationship (1)*
- Being able to make a fire (14)*

Safir is used by professionals in the most extreme conditions. It's a tent you can rely on totally in ice-fields, in storm-force gales, on top of glaciers, or in blazing heat.

This makes Safir the ultimate expedition tent.

But, equally, many people appreciate it simply for the outstanding comfort and manageability that makes it perfect for families, too. You can take it trekking. It's a spacious camping tent for holidays with the car. It's everything all in one!

And you can always find a size that suits your personal needs. Safir is available for 4-10 people sleeping and up to 20 people seated.

Material

We research continuously throughout the world for advanced materials and manufacturing techniques. We are motivated always by quality, not price, and we choose materials according to performance. This is why we are so confident that the Safir is the most outstanding of all Nordic tipis.

It is available with either a world-class, strong and durable cotton/polyester (cp) fabric that has exceptional breathing characteristics, or the exclusive HT-62 extreme fabric. This is a

lightweight, high-tenacity polyamide that is silicone-coated on both sides.

HT-62 is 4-5 times stronger than fabrics often used by other tent makers.

Construction

The Safir top-scores for materials, safety, manageability, cold protection, ventilation and comfort. Three large, net-fitted air intakes are standard. The door is mosquito-protected and it is fitted with extra buttons, in case of emergency.

And it is so convenient. For example, our patented In-Tent Vent™ system lets you adjust the ventilator cap to regulate the temperature without even leaving your sleeping bag.

The reinforced edging and other details are there to give you the best possible resistance to the kind of events that often damage a tent. They give you peace of mind and extend the life span of your investment.

Key features

- Extreme materials
- Top-scoring storm resistance
- Cp: breathable fabric and outstanding comfort and manageability
- Light: extra light plus superior strength with very high comfort and manageability
- Patented In-Tent Vent™ system
